BIO-SEAL

Eco-friendly tape with a water-based adhesive.

Our reinforced paper tape offers maximum security and 100% recyclability.

Bio-Seal is a reinforced paper tape that has a water-activated, starch-based adhesive. It provides a secure seal on every carton every time.

100%
recyclable

Available
in both **plain**
and **bespoke**
printed

Packaging made smarter.

At Carlton, we are continuously creating and developing packaging that is made smarter for our planet.

Bio-Seal is a high-performance, water-activated paper tape created with reinforced fibres for maximum strength and security. Bio-Seal is applied through an adhesive activating dispenser for the most secure carton sealing solution.

TD2100 – Manual

The Marsh manual tape dispenser is an economical water-activated tape dispenser. Due to it being manual, no power supply is required. The large 2L water bottle reduces any downtime making it an ideal dispenser when looking to increase productivity. This dispenser can accommodate tape lengths of up to 305m.

Xtaper®

Xtaper is a handheld alternative for the tape dispensers, therefore meaning it can be used all over the distribution centre or packing operation. It also provides an easy, low-cost solution for quickly expanding a packaging area during peak or when working on irregular projects. This dispenser can accommodate tape lengths of up to 50m.

TD2100 – Automatic

The Marsh automatic tape dispenser is a high-performance addition for any operation looking to dispense a high volume of paper tape. With metal adjustable tape guides, it maintains excellent tape flow, whilst eliminating any additional waste. This dispenser can accommodate tape lengths of up to 305m.

Carlton. Packaging made smarter.
