Year 2025

GHG emissions report

Carlton Packaging LLP

Foreword

Congratulations on pursuing your climate journey. Greenly is proud to contribute to Carlton Packaging LLP's climate strategy, and support you on a path towards Net Zero.

This report synthesizes the results of your greenhouse gas (GHG) emissions assessment. It is a first step toward identifying reduction actions and helping you plan for the energy transition.

While offering some benchmarks to compare with other companies, a GHG emissions assessment is mainly used to identify ways to improve your global impact and to help you define a reduction trajectory. Achieving your decarbonization targets involves engaging your ecosystem of employees, customers and suppliers who will need to align with your new targets.

The evaluation of your emissions is in line with carbon accounting international standards as standardized by the GHG Protocol.

We are happy to support you on your journey. The entire Greenly team would like to thank you for your outstanding commitment.

Alexis Normand

CEO of Greenly

Overview

1 **Introduction**
- Carbon accounting methodology
- GHG emissions assessment parameters
- Executive summary

2 **Emissions report**
- Results by scope
- Results by activity
- Focus by activity

3 **Focus on action plans**
- Estimated impact
- Estimated costs
- Implementation step by step

4 **Conclusion – What's next?**
- Summary of reduction actions
- Next steps

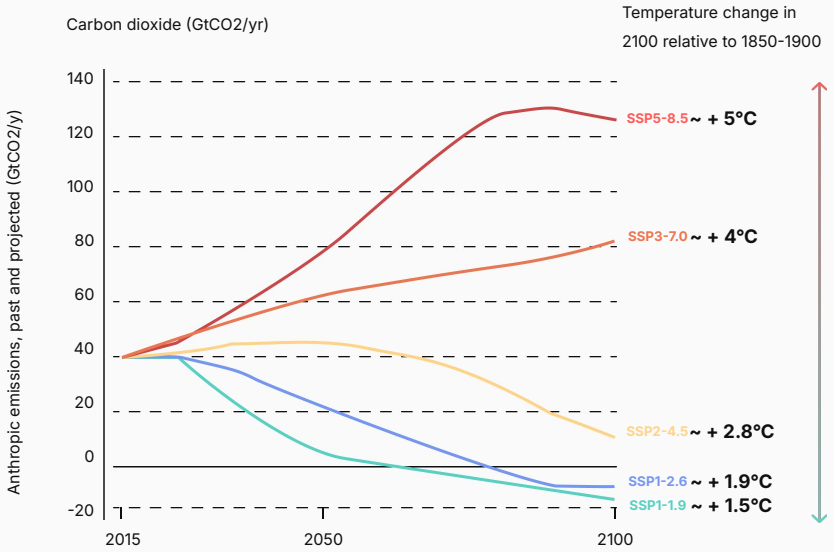

5 **About Greenly**
- Our vision & team

6 **Appendix**
- Scope 1-2 details
- Scope 3 details

carlton greenly

Why care about the energy transition

Regardless of our management of the environmental crisis, organizations and individuals are heading towards major upheavals that will affect entire ecosystems.

Source: Carbone 4

Two types of disruptions

- Physical risks and constraints
- Transition risks and opportunities

Impacted sectors

- Production
- Supply chain
- Market
- Infrastructure
- HR
- Legislation

carlton greenly

Physical risks...

Definition

Risks related to exposure to the physical consequences of global warming

- Average temperature increase and more extreme fluctuation
- Intensification of extreme weather events (rain, heat waves/droughts, etc.)
- Sea level rise
- Scarcity of resources (especially energy), food and water insecurity
- Biodiversity collapse

What are the consequences if I don't commit?

1. Deterioration of infrastructure, value chain losses
2. Direct economic consequences
3. Low resilience to future events and physical constraints (e.g. natural disaster)
4. Dependence on an increasingly fragile supply chain (availability and cost of resources, flexibility, fluctuation of fossil fuels)
5. Disruptions in living conditions (housing, food, health, transport, etc.)

Transition risks (and opportunities)

Definition

Risks related to the transition to a low-carbon economy

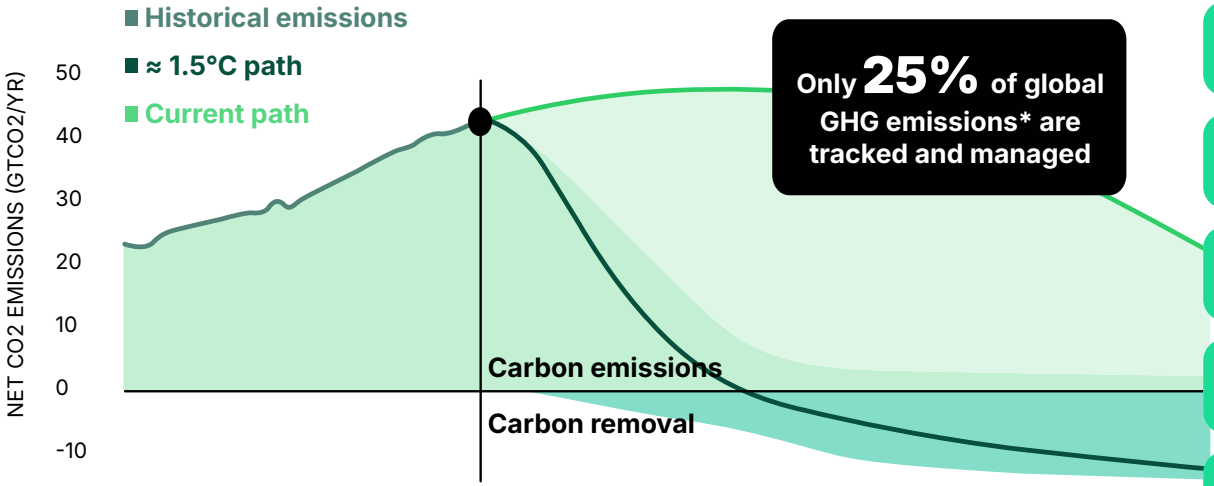

- Regulatory developments and mitigation policies
- Markets and sectors migrating towards promoting low-carbon value creation:
  Opportunities to seize
  Associated market risks
- Growing stakeholder demands on environmental commitments
- Shifting employee mindsets and expectations regarding the environmental reputation of their employer

What are the opportunities if I commit?

1. Optimization of flows and costs
2. More sustainable business activity and corporate strategy
3. Increased competitiveness within my ecosystem
4. Resilience and autonomy of activities in the face of the new socio-economic paradigm
5. Lower exposure to legal and financial constraints and sanctions

It is critical to set a course for Net Zero

REACHING PLANETARY DECARBONIZATION GOALS IMPLIES THAT ALL BUSINESSES TRACK THEIR EMISSIONS, REGULATIONS ARE KICKING IN

Applicable Regulations

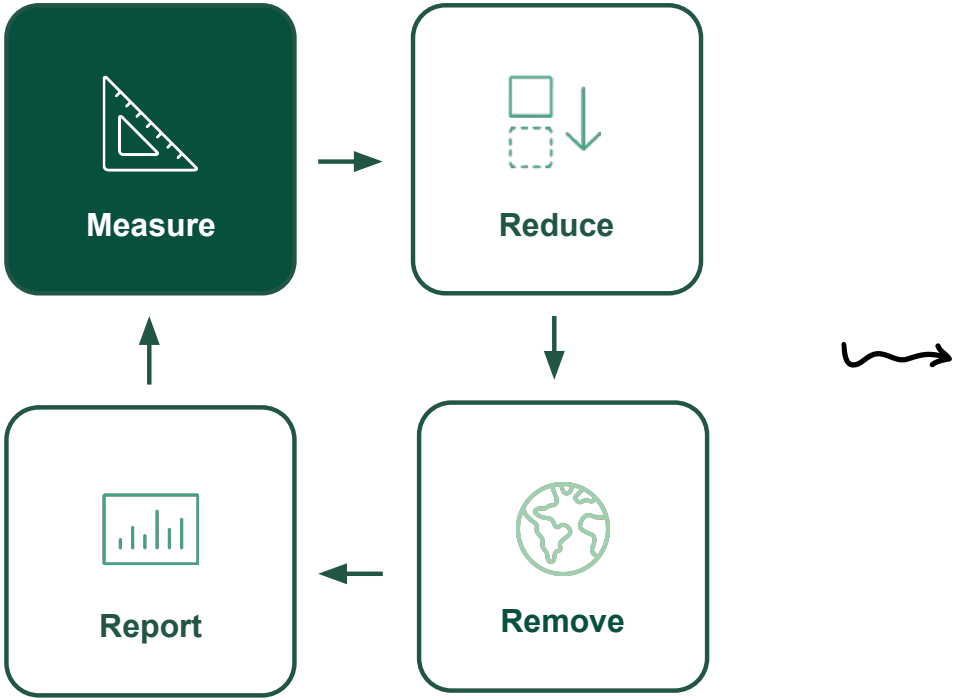

- **EU Emissions Trading System** 2005
- **SECR** 2019
- **SFDR & Taxonomy** 2022
- **NFRD & CSRD** Jan. 2024
- **SEC Disclosure Regulation** Jan. 2027

Solving the Climate Equation

MEASURING EMISSIONS IS THE FIRST STEP TO SETTING A PATH TOWARDS NET ZERO

Carbon accounting methodology

Scope 1 | Direct emissions

GHG emissions generated directly by the organization and its activities.

Examples: combustion of fossil fuels, refrigerant leaks, etc.

Scope 2 | Indirect emissions related to energy consumption

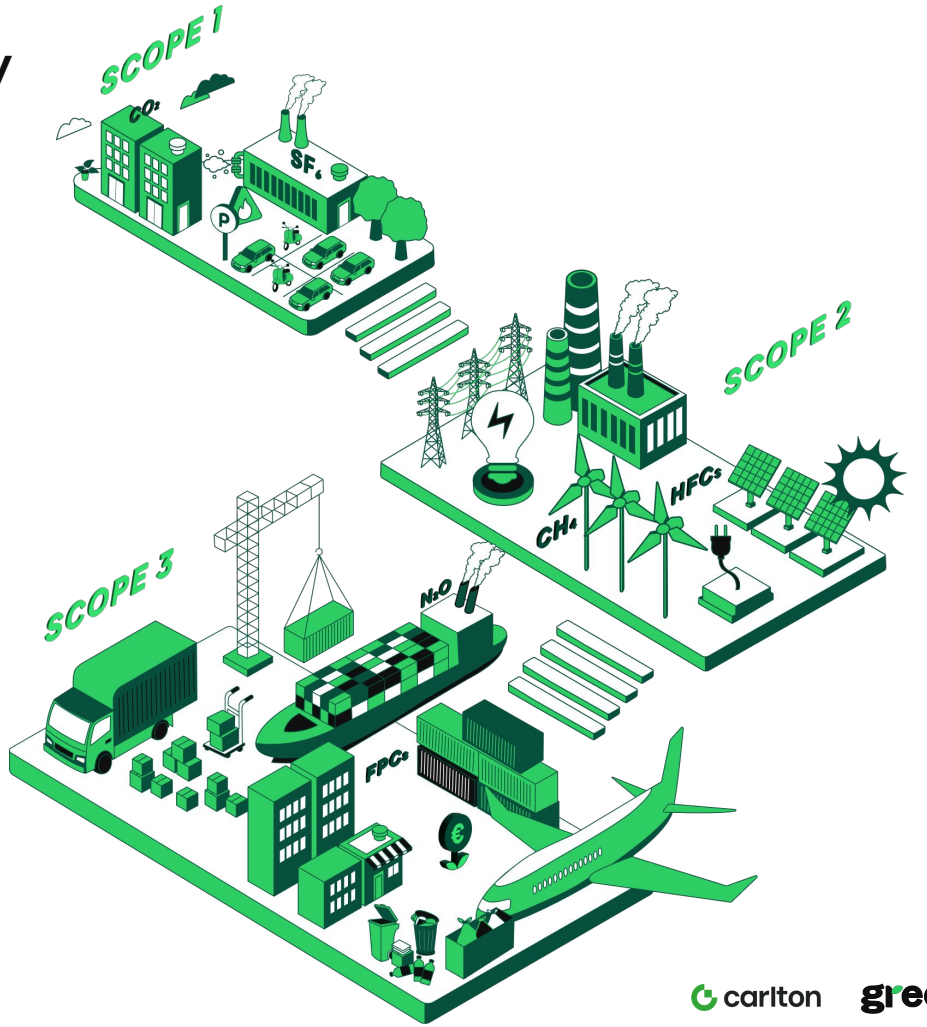

Emissions related to the organization's consumption of electricity, heat or steam.

Example: electricity consumption, etc.

Scope 3 | Other indirect emissions

Emissions related to the organization's upstream and downstream operations and activities

Example: transportation, purchased goods and services, sold products, etc.

carlton greenly

How are emissions computed?

ANALYZING EMISSIONS, AUTOMATING TRACKING

99% of your emissions of 2025 are calculated using activity data

Expense based

Increasing Accuracy*

Activity based

Activity metrics x Emissions factors = CO2 Eq. Emissions

Total Expense 80€	1.75 kgCO2e/€	140 kgCO2e
Total Distance 600 km	0.2 kgCO2e/km	120 kgCO2e
Total Fuel 40 liters	2.8 kgCO2e/liters	112 kgCO2e

*depending on the availability of data

Emission Factor Sources

ADEME, CDP, IEA International Energy Agency, eurostat, AGRIBALYSE, defra, exiobase, Fraunhofer, European Commission JOINT RESEARCH CENTRE, Department for Business, Energy & Industrial Strategy

Methodological reference: ADEME note on the use of accounting data for the GHG Accounting

carlton greenly

GHG emissions assessment scopes

Entity

Carlton Packaging LLP
From January 2025 to December 2025
-

Primary data

Accounting data
Employee survey
Buildings data
Activity data from the following modules: Business travel and vehicle fuel consumption, Freight, Raw material, goods and packaging purchases, Vehicle fleet, Waste , Water consumption

Methodology

Official and approved GHG Protocol methodology; GWP 100
Market-based approach

Emissions generated in and outside the country of operation are accounted for. The methodological details of the calculation of each carbon footprint source are available on the Greenly platform.

Measurement scope

All emissions under operational control

✔ Category included
○ Category excluded
✘ Category irrelevant

Scope 1
✘ 1.1 Generation of electricity, heat or steam
✔ 1.2 Transportation of materials, products, waste, and employees
✘ 1.3 Physical or chemical processing
✔ 1.4 Fugitive emissions

Scope 2
✔ 2.1 Electricity related indirect emissions
✘ 2.2 Steam, heat and cooling related indirect emissions

Scope 3
✔ 3.1 Purchased goods and services
✔ 3.2 Capital goods
✔ 3.3 Fuel- and energy- related activities not included in Scope 1 or Scope 2
✔ 3.4 Upstream transportation and distribution
✔ 3.5 Waste generated in operations
✔ 3.6 Business travel
✔ 3.7 Employee commuting
✔ 3.8 Upstream leased assets
✔ 3.9 Downstream transportation and distribution
✘ 3.10 Processing of sold products
✘ 3.11 Use of sold products
○ 3.12 End-of-life treatment of sold products
✘ 3.13 Downstream leased assets
✘ 3.14 Franchises
✔ 3.15 Investments

General overview

KEY RESULTS – 2025

Absolute	Per Revenue (M)	Per Employee	Per £
65k tCO2e	**1.2k** tCO2e	**591** tCO2e	**< 0.1** tCO2e
	Revenue : 53M£	*Employee number : 110*	*£ : 53M GBP*

This report summarizes the results of Carlton Packaging LLP's 2025 GHG emissions assessment based on the information collected and subject to its completeness, correct categorization and validation.

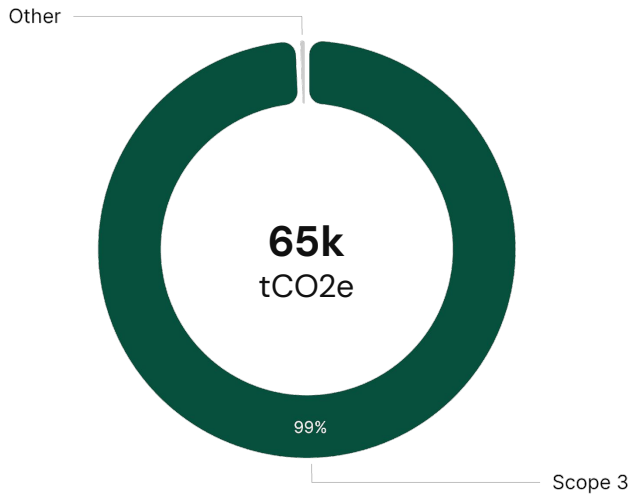

Emissions Report

General overview

BREAKDOWN BY SCOPE – 2025

	Scope 1	Scope 2	Scope 3
Absolute tCO2e	310	141	65k
Employee tCO2e/employee	2.8	1.3	586
Revenue tCO2e/M£	5.9	2.7	1.2k
£ tCO2e/GBP	< 0.1	< 0.1	< 0.1

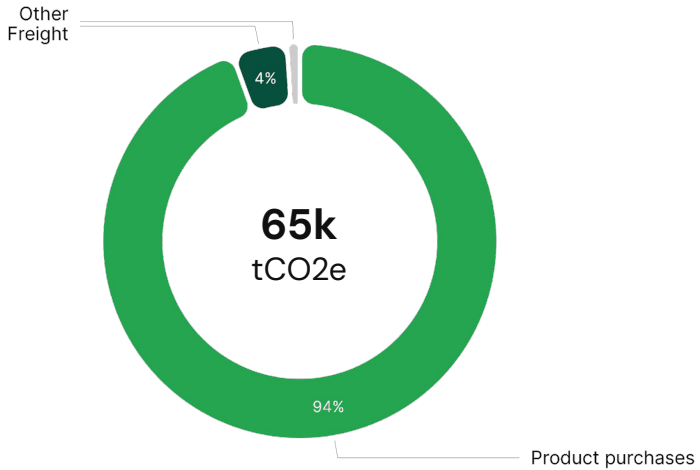

Results subject to the correct categorization and validation of expenses of Carlton Packaging LLP.

General overview

RESULTS BY ACTIVITY

Total emissions of Carlton Packaging LLP,
by activity (% tCO2e)

	Absolute tCO2e	Per employee tCO2e/employee
Product purchases	61k	558
Freight	2.9k	27
Energy	170	1.5
Assets	156	1.4
Services purchases	129	1.2
Travel and Commute	116	1.1
Others**	98	0.9

Is equivalent to:

The amount of CO2 sequestered annually by **5.9k hectares of growing forest***

The annual emissions of **5.3k British people***

38k London - New York round trips*

**Sources: Labos1Point5, ExioBase, French National Forests Office*

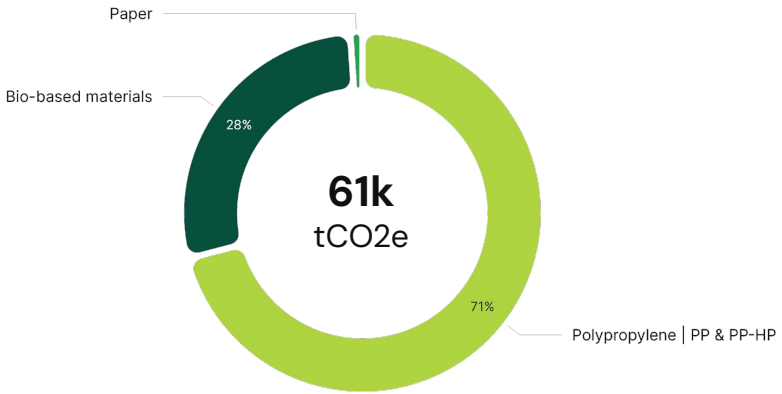

***Food and drinks, Digital, Activities and events, Waste, Investments*

carlton greenly

Focus on Product purchases

Activity data	Expense data
61k tCO2e (100%)	0 tCO2e (0%)

Product purchases emissions by category
(% tCO2e)

94% of total

What is included in this category?

CO2 emissions from purchased products, covering raw material extraction and manufacturing. Excludes transport and end-of-life emissions.

How to reduce the impact of this category?

You can adopt the following measures:
No actions selected for this category

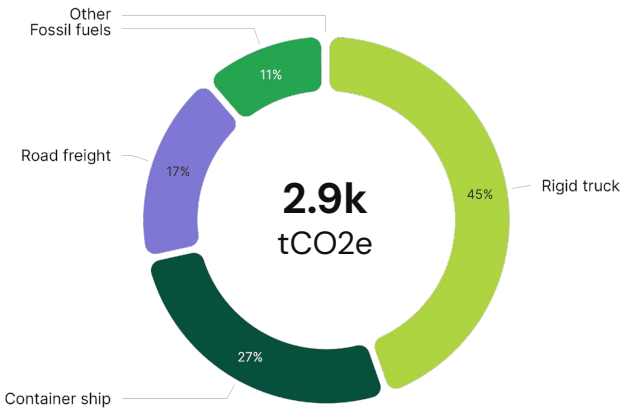

Methodology

1. Emissions calculated using activity data, by multiplying a quantity by an emission factor.
2. The emission factors used for this category come from the following databases: Ecoinvent 3.7.1
3. Details of the methodology used to calculate each carbon footprint source are available on the Greenly platform.

Focus on Freight

Activity data	Expense data
2.9k tCO2e (100%)	0.7 tCO2e (0%)

Freight emissions by category
(% tCO2e)

4.5% of total

What is included in this category?

CO2 emissions from freight transport, covering shipping, trucking, rail, and air cargo. Includes emissions from fuel combustion and production.

How to reduce the impact of this category?

You can adopt the following measures:
No actions selected for this category

Methodology

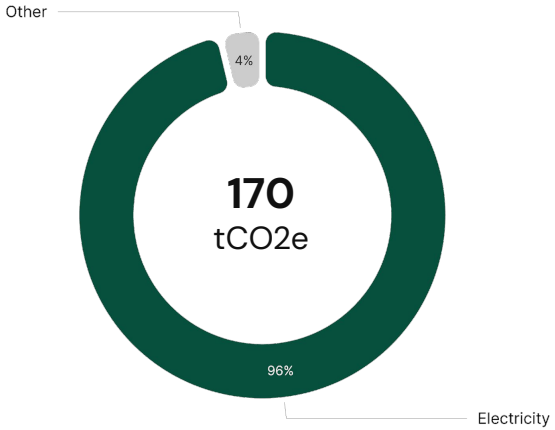

1. Emissions calculated using activity and expense data, by multiplying a quantity by an emission factor.
2. The emission factors used for this category come from the following databases: Exiobase 3.8.2, Greenly 1.0, Uk GHG Conversion Factor 2025
3. Details of the methodology used to calculate each carbon footprint source are available on the Greenly platform.

Focus on Energy

Activity data
170 tCO2e (100%)

Expense data
0 tCO2e (0%)

Energy emissions by category
(% tCO2e)

0.3% of total

What is included in this category?

CO2 emissions from energy production and consumption, covering fossil fuels and renewables. Varies by energy source type, efficiency, and carbon intensity.

How to reduce the impact of this category?

You can adopt the following measures:
• Purchase renewable electricity

Methodology

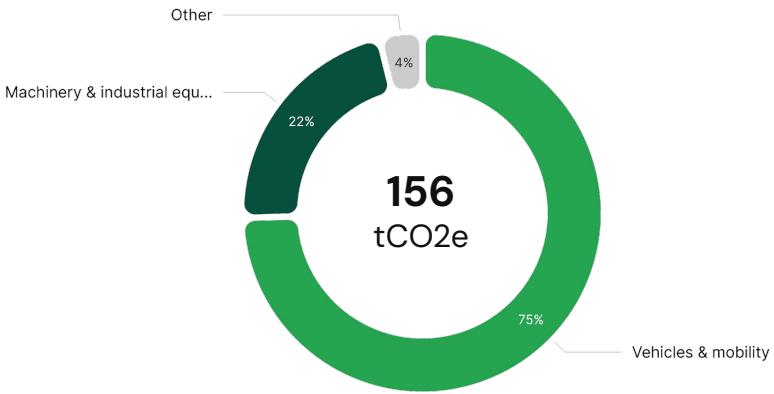

1. Emissions calculated using activity data, by multiplying a quantity by an emission factor.
2. The emission factors used for this category come from the following databases: undefined 2024, Base Empreinte Ademe 23.9, Greenly 1.0, IEA 2025, Uk GHG Conversion Factor 2025
3. Details of the methodology used to calculate each carbon footprint source are available on the Greenly platform.

Focus on Assets

Activity data
117 tCO2e (75%)

Expense data
40 tCO2e (25%)

Assets emissions by category
(% tCO2e)

0.2% of total

What is included in this category?

CO2 emissions from capital assets, covering construction, operation, and maintenance. Excludes energy consumption during use and end-of-life emissions.

How to reduce the impact of this category?

You can adopt the following measures:
No actions selected for this category

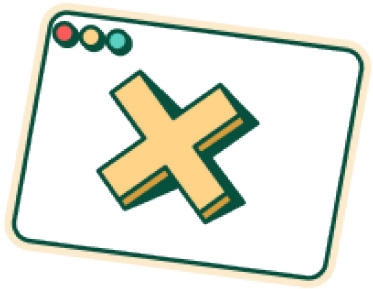

Methodology

1. Emissions calculated using activity and expense data, by multiplying a quantity by an emission factor.
2. The emission factors used for this category come from the following databases: Company Report 1.0, Exiobase 3.8.2, Greenly 1.0
3. Details of the methodology used to calculate each carbon footprint source are available on the Greenly platform.

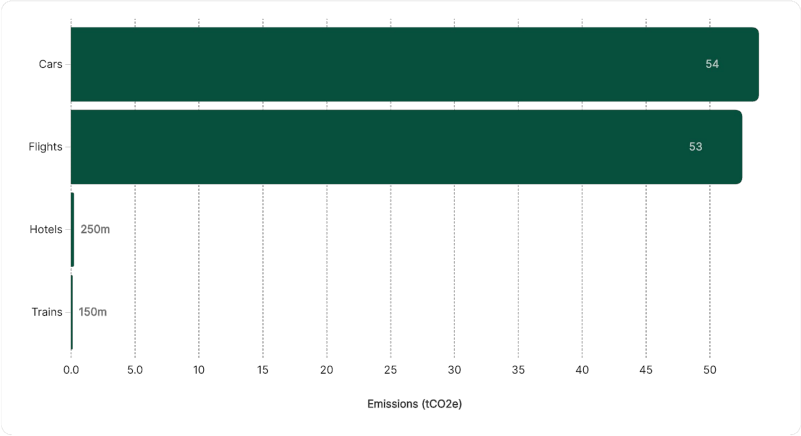

Focus on Travel and Commute

ACTIVITY DATA ANALYSIS: BUSINESS TRAVEL AND VEHICLE FUEL CONSUMPTION

Quantities

Emissions

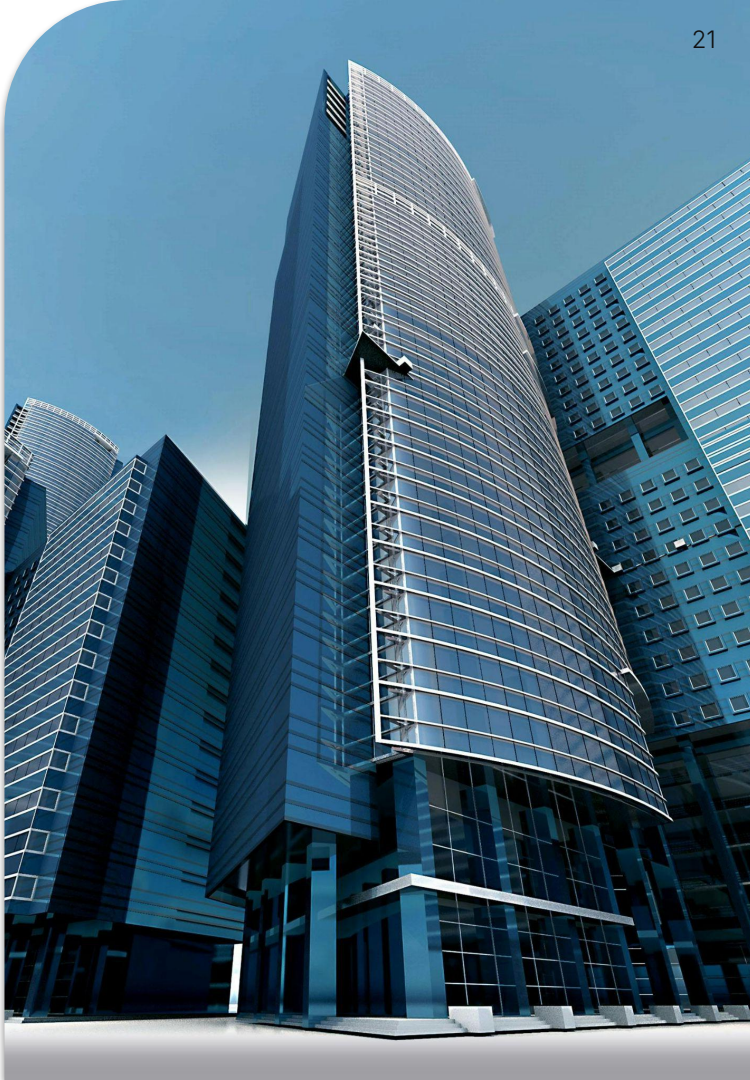

This module covers 0.2% of total emissions.

This represents 107 tCO2e.

Methodology

1. Emissions are computed by multiplying the physical data with emission factors (in kgCO2e, for instance).
2. Emission factors used for this category come from the following databases: Exiobase 3.8.2, Greenly 1.0
3. The specific steps involved in calculating the carbon footprint for each source can be found in the methodological details provided on the Greenly platform.
4. To see more visualisations visit Greenly's platform

Focus on buildings

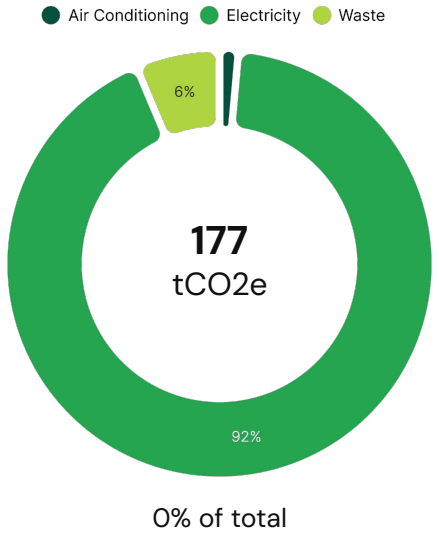

Focus on buildings

ACTIVITY ANALYSIS

Activity emissions
175 tCO2e (99%)

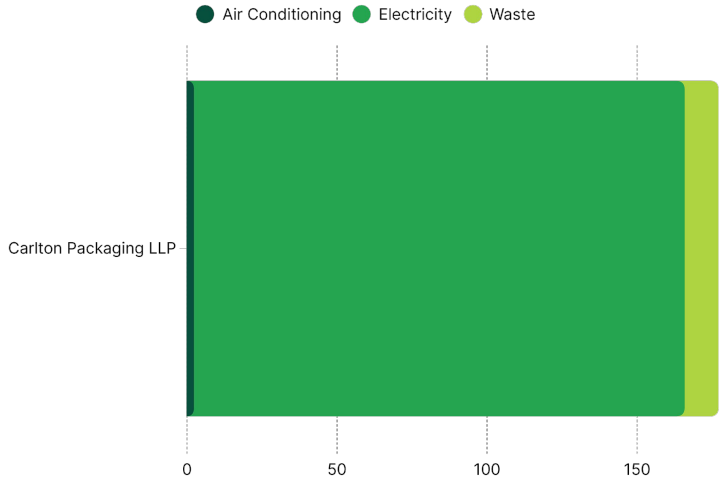

Estimated emissions
2.5 tCO2e (1.4%)

Total emissions per category (tCO2e)

0% of total

Total emissions per building (tCO2e)

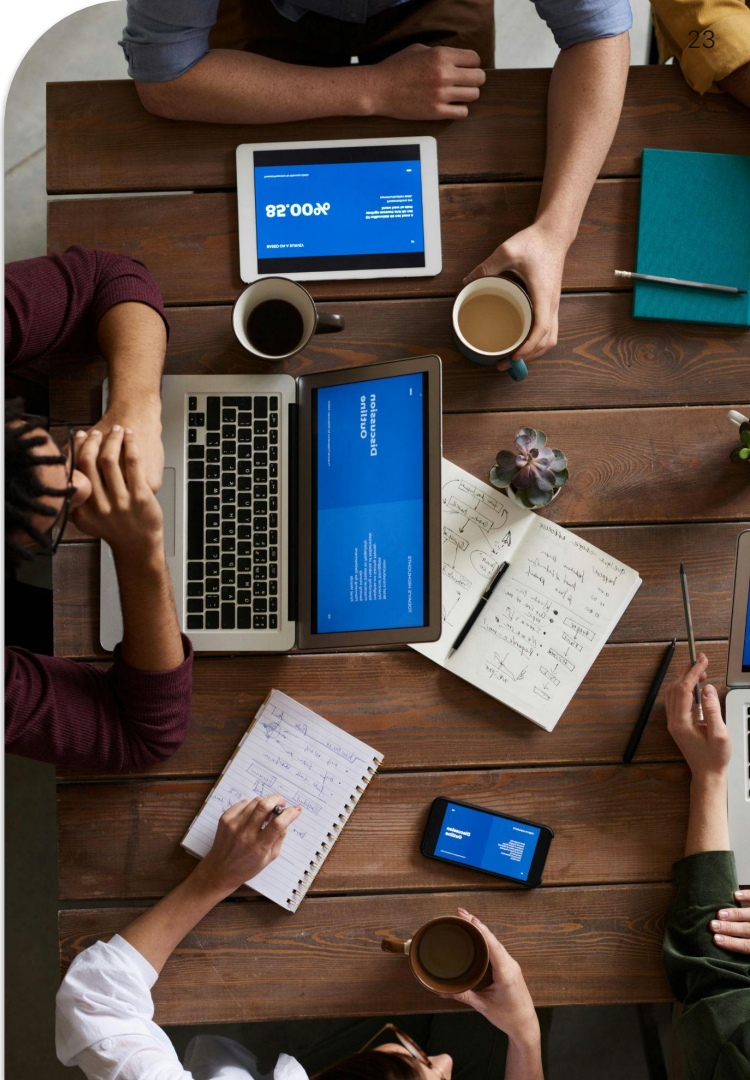

Methodology

1. Emissions linked to heating and energy use are calculated by multiplying (where available) the building's electricity or gas consumption by an emission factor. Failing this, an estimate is calculated on the basis of building surface area, or even the number of employees when surface area is not provided.
2. Waste-related emissions are estimated on the basis of the number of employees.
3. Air-conditioning emissions correspond to refrigerant leaks (average estimate).

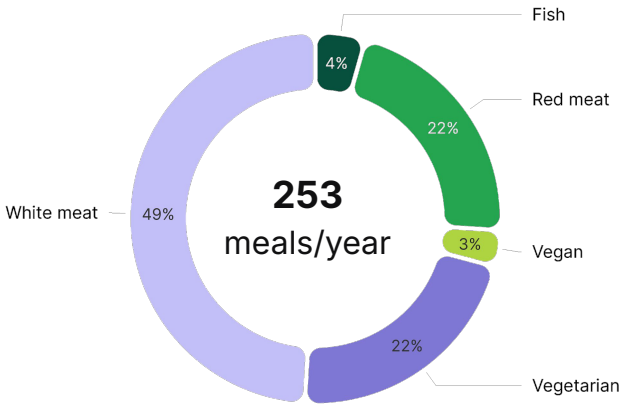

carlton greenly

Focus on employees

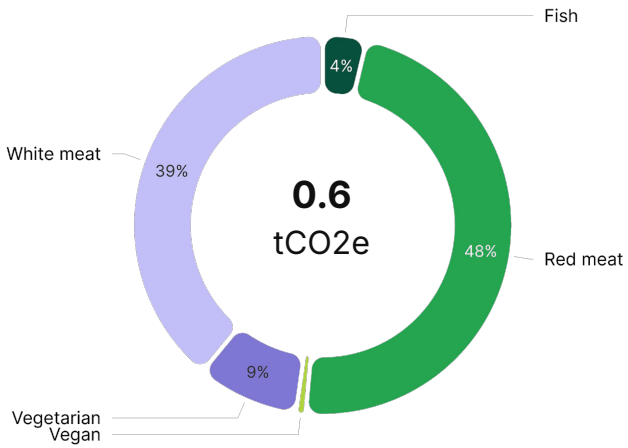

Focus on Employee Meals

Number of meals per employee per year
(per diet)

GHG emissions
(tCO2e / employee)

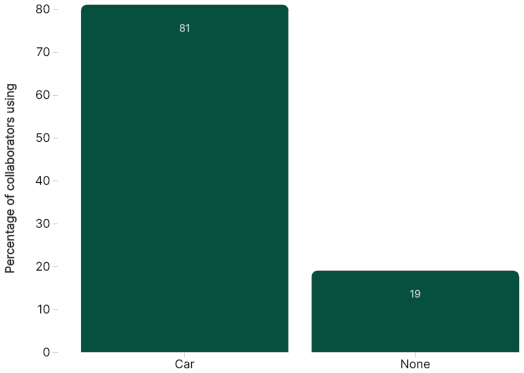

Methodology

Analysis is based on the employee survey, which obtained a 85% response from your employees to whom the questionnaire was sent (70 responses for meals section).
The data used to calculate meals-related emissions are from the French Agency for Ecological Transition (ADEME).
Meal emissions are not accounted for, this slide is only an analysis of the responses to the employee survey.

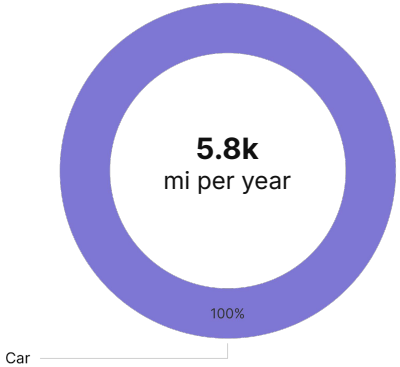

carlton greenly

Focus on Employee Commute

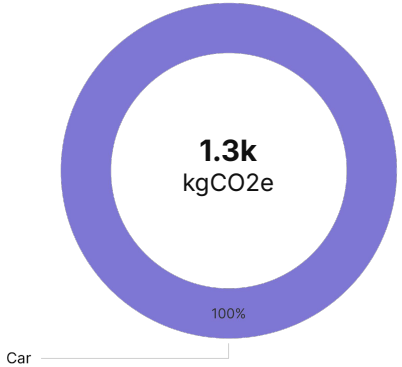

Usage of transport modes

Yearly mean distance distribution

GHG emissions (kgCO2e / employee)

On average, your employees travel 5.8k mi each year, emitting 1.3k kgCO2e for home-work commuting.

Methodology

Analysis is based on the employee survey, which obtained a 85% response from your employees to whom the questionnaire was sent (70 responses for commute section).

The data used to calculate commute-related emissions are from the French Agency for Ecological Transition (ADEME).

More details on the employees page of Greenly

carlton greenly

Focus on Action Plans

How can I implement effective reduction actions?

To meet global targets, emissions will have to fall by **3 to 7% per year***. It's a tough target, but a necessary one!

WHAT ARE THE BEST PRACTICES FOR ACHIEVING THESE OBJECTIVES?

Communicate → **Involve** → **Engage** → **Raise awareness**

COMMUNICATE the results of your GHG assessment to all your teams so that they are on board with the process of reducing emissions.

INVOLVE management and find internal sponsors responsible for implementing reduction actions.

ENGAGE your ecosystem (suppliers and customers) and ask about their reduction strategy, in order to prioritise virtuous suppliers.

INCREASE your teams' awareness of climate change using our platform to alert and facilitate the implementation of your reduction actions.

These first steps will enable you to maximise your chances of success in implementing reduction actions.

WHAT REDUCTION MEASURES CAN MY COMPANY TAKE?

The reduction actions we recommend are selected with:

AMBITION

Some actions involve major changes, but they will bring you closer to achieving the global climate targets.

REALISM

The action plans are based on practical examples already implemented in other pioneering companies.

EFFICIENCY

Implementing them will have a real impact on your emissions in the short and long term.

*Source: IPCC

Energy

Purchase renewable electricity

Energy

A Power Purchase Agreement (PPA) commits the buyer to purchase a specific amount of electricity from the producer over a set period at a fixed price. PPAs help finance renewable energy projects and reduce the carbon intensity of the supplied energy. Meanwhile, certificates of origin (RECs or GOs) certify the renewable source of electricity. They provide less stable revenue for suppliers and encourage renewable energy investments to a lesser extent.

Benchmark

Lidl : Since March 2018, Lidl Ireland and Northern Ireland converted to using only renewable electricity.
Adobe : Adobe has committed to 100% of their operations with renewable electricity from 2035.

Estimated Impact

PPAs or RECs allow you to reduce to the same extent as installing renewable energy sources on your premises, but only if you account energy related emissions using the market-based method.

Estimated Cost

In the case of PPAs and RECs, energy prices might be higher than conventional electricity production. Contact a renewable energy provider to get a more precise quote.

Recommended Service Providers

Ekwateur
Eneercoop

Implementation

1. BENCHMARK the different energy providers to determine which offers the most interesting offer from a techno-economic perspective.
2. DEVELOP a comprehensive implementation strategy (detailed plan with steps, timelines, resource allocation, relevant stakeholders).
3. IMPLEMENT monitoring solutions to track green energy consumption and cost / CO2e savings.

Travel and Commute

Renew your gas vehicle fleet with electric vehicles

Travel

Even though the manufacturing of an electric vehicle causes more emissions than a thermal one, in the long term, the CO2 emitted by the combustion of fuel by thermal cars are significantly greater than those from the production of electricity for the electrical car. However, this conclusion depends on the carbon intensity of the country you're located in and the usage of the vehicule. To check the carbon intensity of electricity in your country, use the website electricity maps. Hybrid vehicles can be an option too, under the condition that their electric functionalities are used as much as possible in a country with a low carbon energy mix: otherwise, they can actually have higher emissions than their thermal counterparts.

Benchmark

UPS has been transitioning its delivery fleet to electric vehicles. The company has set a target of having 40% of its ground fleet be electric by 2025 and aims to achieve 100% alternative fuel vehicles by 2040. UPS has communicated extensively about its EV adoption plans, highlighting the environmental benefits and showcasing its EV deployments in various cities.

Estimated Impact

In the worst case; the battery is produced in China and is powered with a very emitting energy mix. It then can reduce emissions by 20 to 30% compared to an equivalent thermal model. In the best case, the battery is produced and powered using a green energy mix; emissions reduction over the complete lifecycle can then reach up to 80%.

Estimated Cost

Although electric cars have a higher upfront cost, their recharging costs are far lower than those of a conventional car. Throughout their complete lifecycle, their costs become similar.

Implementation

1. IDENTIFY the thermal vehicles that are used in a context where they can be gradually be replaced by electric vehicles.
2. MAKE a benchmark of the possible electrical vehicles to buy.
3. ROLLOUT the change progressively through your vehicle fleet, and gather feedback from end-users.

Replace part of your business travel with video conferencing

Travel

By promoting the use of video conferencing instead of direct travel, your business travel CO2 emissions will be significantly reduced. This is the main reason why overall emissions were particularly low during the COVID period!

Benchmark

Microsoft has been actively promoting the use of video conferencing and reducing business travel. In a blog post, they shared that they have saved millions of dollars in travel expenses and reduced carbon emissions by using Microsoft Teams for meetings and collaborations instead of traveling to different locations.
Accenture, a global professional services company, has recognized the environmental impact of business travel and actively encourages the use of virtual meetings.

Estimated Impact

While the costs of these meeting forms depend on many factors such as distance traveled, meeting duration, and the technologies used, we find that video conferencing takes at most 7% of the energy/carbon of an in-person meeting. Emissions are thus reduced by more than 90%.

Estimated Cost

Given online meeting solutions are already in place for most companies, no additional cost comes from this measure.

Recommended Service Providers

Your current video conferencing provider

Implementation

1. IDENTIFY the routes that can be avoided and agree with the different actors of the meetings on a video conferencing solution.
2. ESTIMATE the carbon and monetary savings from avoiding transportation.
3. AGREE with partners/colleagues who usually meet in person to schedule the video conference meeting.

Reduce the number of people travelling on the same mission

Travel

Reducing the number of people involved in business travel can reduce the carbon footprint of your activities. By optimising the number of employees sent on business trips, it is possible to significantly reduce the CO2 emissions associated with travel and keep costs down. What's more, better planning can improve overall efficiency.

Benchmark

Schneider Electric: The company has reduced its business travel by encouraging virtual meetings and rationalising necessary travel. When travel is unavoidable, Schneider Electric limits the number of participants.

SAP: Software publisher SAP has also reviewed its travel policy, introducing measures to reduce the number of people travelling on similar assignments. SAP prioritises essential travel and makes extensive use of videoconferencing technologies for internal and external meetings.

Estimated Impact

Having two people instead of four on the same business trip reduces the emissions linked to that trip by 50%. You can estimate the total impact of this action by assessing how much of your business travel can be optimised in this way.

Estimated Cost

Reduction in travel costs, including tickets, accommodation and living expenses, proportional to the number of people not sent.
50% of the costs with the impact estimate assumptions above.

Recommended Service Providers

-

Implementation

1. ASSESS all assignments requiring business travel. Identify missions where the number of participants can be reduced.
2. DEVELOP and apply a clear travel policy to ensure that the minimum number of people required for missions is kept to a minimum.
3. ESTABLISH and monitor your KPIs (e.g. percentage reduction in the number of passengers per mission) and the associated reduction in emissions.

Conclusion

Conclusion

The GHG assessment made it possible to identify Carlton Packaging LLP's main GHG emission sources so as to frame the company's carbon strategy and identify the items that need to be studied in greater depth with the aim of continuously improving the company's environmental impact.
It has been established that direct emissions (Scope 1) and energy-related indirect emissions (Scope 2) represent a small part of a company's impact. It is therefore essential to mobilize our company's suppliers and employees.

To meet the 2015 Paris Agreement target of a 50% reduction in GHG emissions between 2020 and 2030, we need to achieve a 6.7% reduction in emissions within one year (-4.3k tCO2e).

The recommended next steps in Carlton Packaging LLP's carbon strategy are:

1. **Study key emission sources in greater depth,** if you opt for that. Your Climate Expert can help you decide between the different options available!
2. **Establish GHG emission reduction targets and implement an action plan** in order to achieve these targets.
3. **Engage your suppliers** using the Greenly supplier engagement tool.
4. **Engage your employees** using the interactive Greenly training quizzes.
5. **Communicate with your stakeholders** about your commitment and carbon footprint, your reduction targets and the action plan considered.
6. **Contribute to certified GHG reduction / sequestration projects** available on the Greenly platform.

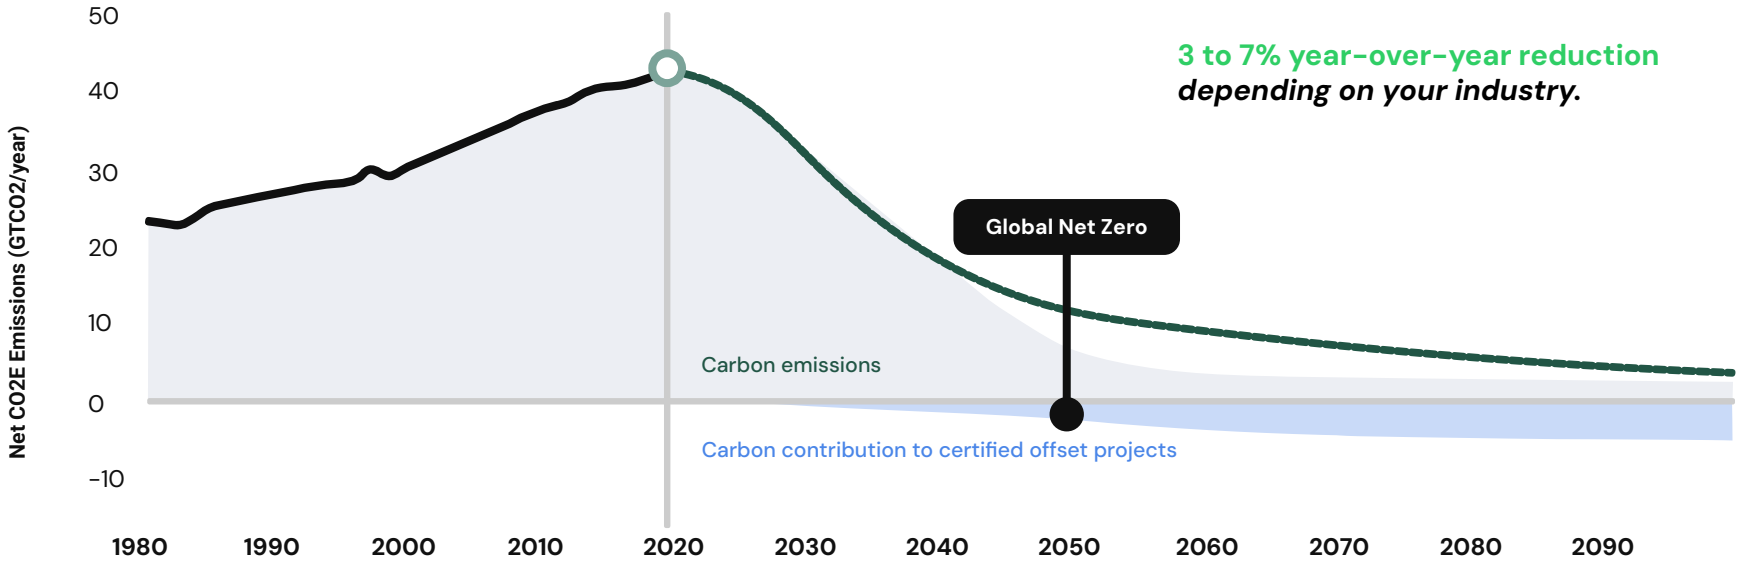

carlton greenly

What's next?

Committing to a multi-year decarbonization strategy

A SUSTAINED EMISSIONS REDUCTION BASED ON THE LEVELS REQUIRED BY THE PARIS AGREEMENT

carlton greenly

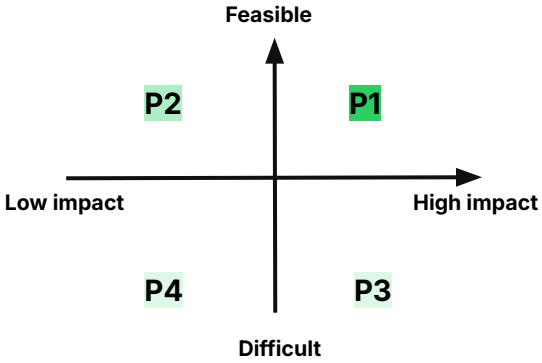

How can I build my reduction trajectory?

THE 4 KEY STAGES IN DEFINING AND FOLLOWING YOUR TRAJECTORY

Refine your greenhouse gas emissions assessment

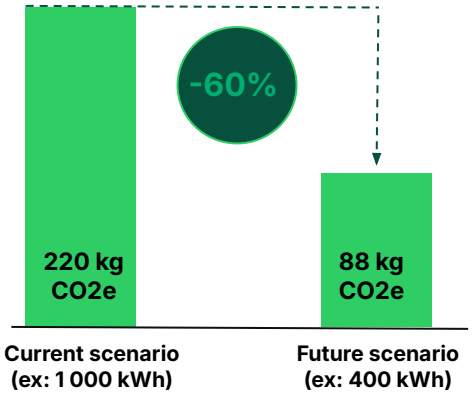

Your 2025 assessment is based on **99%** of physical data, the rest being financial data. We recommend that you regularly improve the accuracy of your greenhouse gas assessment by adding more physical data. You will be able to quantify and monitor your reductions with precise targets in km, kg, kWh, etc.

Prioritize your actions

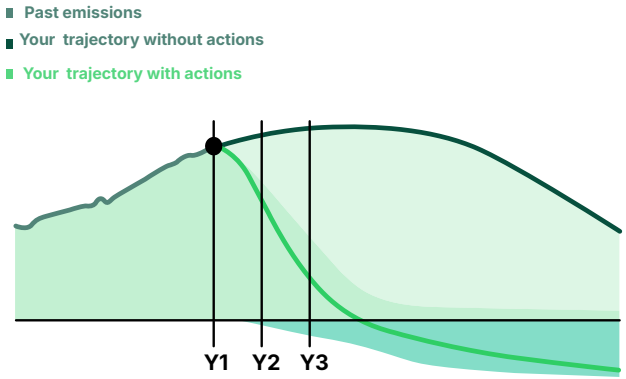

Place your actions on the matrix after identifying operational constraints in consultation with your teams.

Calculate their reduction potential

Select the right KPIs before you start, then calculate the reduction potential.

Monitor your results

Monitor your progress regularly and measure your results during your annual GHG assessment.

The 5 Pillars of a Climate Strategy

DISCOVER THE 5 PILLARS BASED ON THE NET ZERO INITIATIVE

1. Measure

- Track emissions annually
- Go deeper in the analysis of your main emission sources

Carbon data analysis

CSRD

LCA

2. Reduce

- Choose an action plan in line with the Paris Agreement
- Quantify your action plan to build a carbon trajectory

Action Plan Tab

3. Educate

- Engage your suppliers in your strategy
- Train your employees

Supplier engagement

Employee training

4. Commit

- Commit to an objective
- Communicate transparently

Communication kit

5. Contribute

- Contribute in carbon sequestration & avoidance projects to cover non compressive emissions

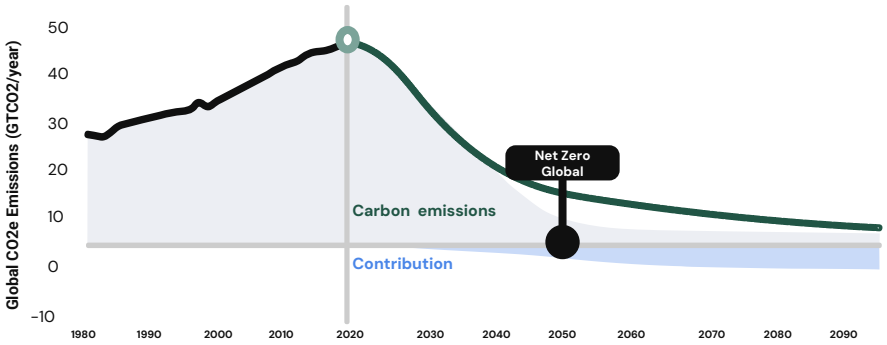

Carbon contribution

Commit to a Multi-year Carbon Trajectory

A LONG-TERM REDUCTION IN EMISSIONS IN LINE WITH THE OBJECTIVES OF THE PARIS AGREEMENT OR YOUR PERSONAL OBJECTIVES

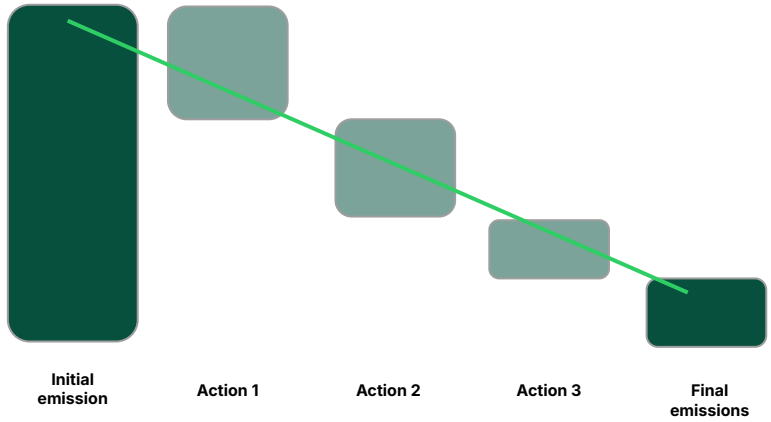

Paris Agreement Objective

-3% to -7% reduction annually

Objective Based on your Actions

Define your reduction objective based on facilitating actions

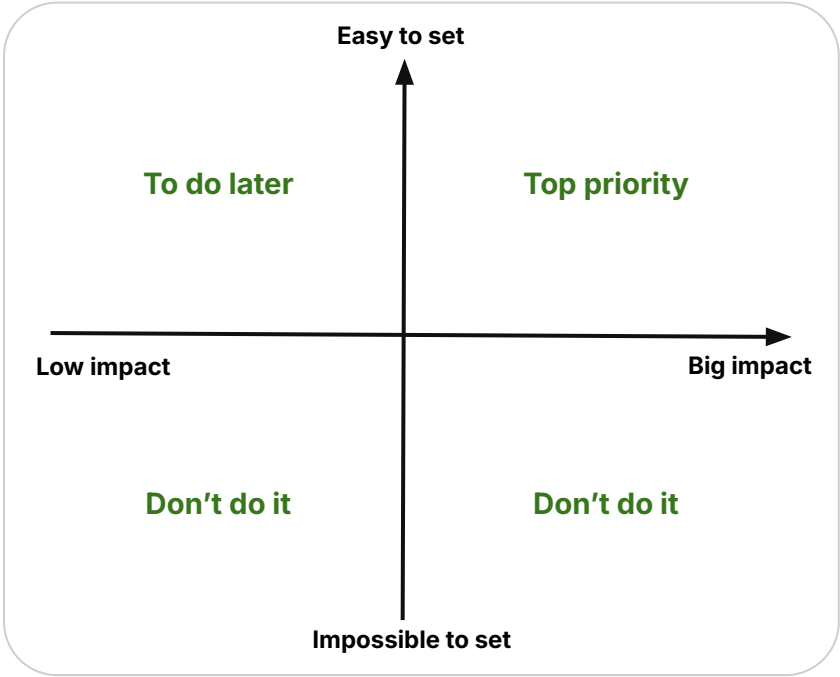

Build Your Carbon Reduction Trajectory

3 KEY STEPS TO BUILD YOUR TRAJECTORY

Prioritize your actions | Calculate their reduction potential | Optimize your trajectory

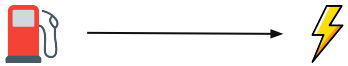

1. Bring together the stakeholders in your climate strategy
2. Place the action suggestions from the Greenly report on the matrix after identifying their constraints
3. Keep all feasible actions and prioritize those with the greatest impact

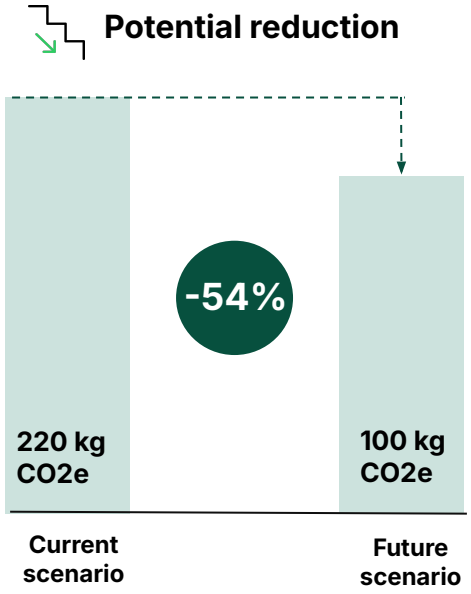

Build Your Carbon Reduction Trajectory

3 KEY STEPS TO BUILD YOUR TRAJECTORY

Prioritize your actions | **Calculate their reduction potential** | Optimize your trajectory

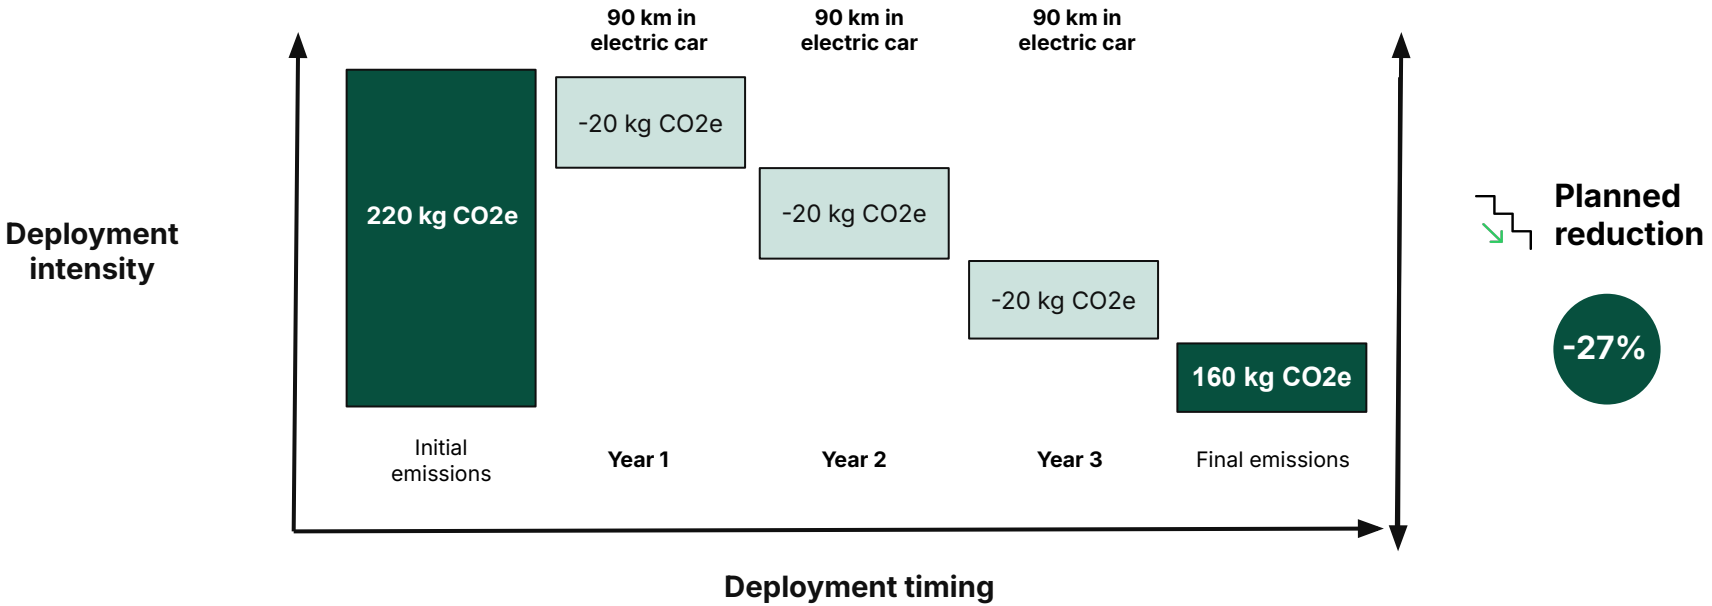

Current scenario	1,000 km per year with thermal cars	1,000 km per year with electric cars	Future scenario
Emission Factor	0.22 kg CO2e/km	0.1 kg CO2e/km	Emission Factor
Total Emissions	220 kg CO2e	100 kg CO2e	Total Emissions

Build Your Carbon Reduction Trajectory

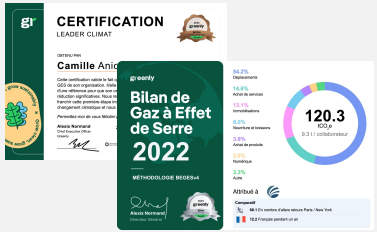

3 KEY STEPS TO BUILD YOUR TRAJECTORY

Prioritize your actions | Calculate their reduction potential | **Optimize your trajectory**

Everyone should strive to achieve Net-Zero, not just the elite. Consumers want all companies to implement sustainable changes

Greenly is instigating a bottom-up climate revolution making it simple for all companies & employees to start their climate journey

Working with our initial 1,000 customers, we see that early adoption of carbon initiatives boosts growth and profitability, while helping companies start their climate journey

As regulations make carbon disclosure mandatory, Greenly is building highly-scalable tech to address the enormous influx of mid-market businesses joining the energy transition.

Greenly's product-led growth rests on three pillars: 1- a tech-enabled end-to-end carbon platform ; 2- an outstanding UX to cultivate a growing community of climate leaders: 3- Lastly, a global ecosystem of partners who leverage Greenly to scale carbon accounting over their network.

Appendix

Disclaimer

These quality controls were not automatically passed by the current carbon footprint. However, Carlton Packaging LLP reviewed them and decided to carry on with the generation of the carbon footprint. You can see the full detail on the platform.

Greenly expert requested changes	Quality check name	Justification
No	Ensure the accuracy of your top 5 emission sources	
No	No sub-category should exceed 10% of total emissions	Justification is too long and can be seen in the platform.
No	The Employee Questionnaire Should Reach All Employees	We circulated the survey to all employees who have email access.

Scope 1&2

Scope	Name	tCO2e	
1.1	Generation of electricity, heat or steam	-	EXCLUDED : Category is not relevant for the company
1.2	Transportation of materials, products, waste, and employees	307	
1.3	Physical or chemical processing	-	EXCLUDED : Category is not relevant for the company
1.4	Fugitive emissions	3	
2.1	Electricity related indirect emissions	141	
2.2	Steam, heat and cooling related indirect emissions	-	EXCLUDED : Category is not relevant for the company

To see more details of the methodology for each regulatory entry please visit Greenly!

Scope 3

98% accounted

Scope	Name	tCO2e	
3.1	Purchased goods and services	61578	
3.2	Capital goods	8	
3.3	Fuel- and energy- related activities not included in Scope 1 or Scope 2	96	
3.4	Upstream transportation and distribution	2089	
3.5	Waste generated in operations	13	
3.6	Business travel	53	
3.7	Employee commuting	13	
3.8	Upstream leased assets	154	
3.9	Downstream transportation and distribution	503	
3.10	Processing of sold products	-	EXCLUDED : Category is not relevant for the company
3.11	Use of sold products	-	EXCLUDED : Category is not relevant for the company
3.12	End-of-life treatment of sold products	-	EXCLUDED : Data not available , Excluded because not mandatory for SECR
3.13	Downstream leased assets	-	EXCLUDED : Category is not relevant for the company
3.14	Franchises	-	EXCLUDED : Category is not relevant for the company
3.15	Investments	1	
4.1	Other emissions - Emissions from biomass (soil and forests)	0
